

# Predicting NBA Player Salary with Regression Modeling

A hand holding a basketball in a stadium. The background shows a basketball court with a hoop and backboard, and a large arena with tiered seating. Bright spotlights illuminate the scene from above, creating a dramatic atmosphere. The basketball is orange with black lines, and the hand is positioned at the bottom center, holding the ball.

Andrew Wong

# Motivation & Goals:

- **Basketball fanatic, dream job to work for NBA**
- **Use NBA stats to create best fitting model to predict salary**
- **Identify the most valuable stat categories**
- **Identify overpaid/underpaid players**

# Obtaining Data

BeautifulSoup

# Data

- **NBA Player Stats: Per Game**
- **NBA Salary Data**
- **10 Seasons (2021 - 2012)**

# Design

- Removed redundant features to avoid multicollinearity
- Features: Age, MP, Pos, 3P, 2P, FT, TRB, AST, STL, BLK, TOV, PTS, YEAR
  - Feature Engineering: Dummify Pos (PG, G, SG, SF, F, PF, C)
  - Approximate Value (AV) metric:
    - Credits Formula =  $(PTS) + (TRB) + (AST) + (STL) + (BLK) - (\text{Field Goals Missed}) - (\text{Free Throws Missed}) - (TOV)$   
 $AV = (\text{Credits}(3/4)) / 21$  <<https://www.nbastuffer.com/analytics101/approximate-value/>>

# Model Performance

	R2 Train+Val	R2 Test
LR	0.568	0.575
Poly	0.689	0.682
Lasso	0.648	0.648
